Stable HOCl for extended shelf-life	✓	✗
Supports patient's own post-treatment recovery	✓	✗

Most dental rinses rely on bleach, chlorhexidine, EDTA, or hydrogen peroxide to kill oral viruses and bacteria: toxic chemicals known to inhibit effective recovery.

Offering a high level of performance and safety to protect against infection, OraWize+ is a complete, non-irritating, non-sensitising antimicrobial HOCl dental rinse that can be used pre-procedure to reduce microbial load, during dental treatment for endodontic and periodontal irrigation and post-procedure to support the oral healing process.

Using an ineffective dental rinse can result in: scan to know the risks

Reduce the risks | With OraWize+

OraWize+

Performance

- Unique formulation eliminates harmful organisms before, during and after treatment in under a minute
- Provides perfect healing conditions by keeping bacteria and biofilm at bay
- As effective as hypochlorite at destroying E.faecalis in endodontic treatment
- Helps manage dry sockets
- Non staining, ready to use formula, stabilised for an extended HOCl shelf life
- Convenient sizes: 1L and 5L bottles. 250ml option for patient's post-treatment recovery at home

Safer

- Ideal for use with vulnerable and immunocompromised patients
- Does not irritate mucous membranes
- Harmless to oral and periodontal tissue and surrounding structures
- Tooth safe, thanks to neutral pH
- The first HOCl dental rinse CE-marked as a Medical Device
- Meets stringent standards for killing viruses (BS EN 14476)
- Free from alcohol and artificial preservatives
